Higher SDD Worksheet 2 – File Handling

Name	

Change the code to read the data from a file into a record structure instead of 2 parallel arrays.

```vb
Public Structure UserInfo

        Dim username as string
        Dim userages as string

End Structure

Private Sub btnReadCSV_Click(sender As Object, e As EventArgs) Handles
btnReadCSV.Click

        Dim users(10) as UserInfo
        Dim separated(2) As String
        Dim counter As Integer

        FileOpen(1, "H:\userdetails2.txt", OpenMode.Input)

        Do Until EOF(1)

            separated = Split(LineInput(1), ",")

            users(counter).username = separated(0)
            users(counter).userages = separated(1)

            counter = counter + 1

        Loop
        FileClose(1)

        For index = 0 To counter - 1
            txtOutput.AppendText(users(index).username & vbTab &
users(index).userages & vbNewLine)

        Next

End Sub
```
